

Angela Guardia

Software Engineer

📞 661-404-6781 | ✉️ angelaguardia20@gmail.com | [🌐 linkedin.com/in/angela-guardia](https://www.linkedin.com/in/angela-guardia) | [🐙 github.com/angelaguardia](https://github.com/angelaguardia)

SKILLS

Languages: Kotlin, Python, Ruby, SQL, Bash, Starlark
Backend: LLM APIs, MCP, gRPC, Protobufs, REST APIs, AWS (SQS, S3), Datadog, Kafka
Tools: Rails, Bazel, Claude Code, Git/Github, Jenkins, Looker, Jira
Databases: DynamoDB, MySQL, PostgreSQL
Concepts: AI agents, Prompt Engineering, Distributed systems, Microservices, Event-driven systems, Feature flagging & experimentation, Observability, CI/CD, OOP

EXPERIENCE

Software Engineer, Trust and Safety | Block, Inc. | New York, NY, United States Apr 2025 - Feb 2026

- Designed and shipped a Cash App warning system that diverts false-positive denylists to educational warnings via in-app blockers, multi-channel notifications, and event-driven strike enforcement — projected to reach 1.2M customers/yr and prevent 350K account closures/yr (reform rate 7% → 30%)
- Built foundational infrastructure for in-app denylist appeals by refactoring the claims service to support account-level (not just transaction-level) claims which enables Cash App customers to self-serve denylist appeals for the first time
- Applied a structured AI-assisted workflow (research → plan → implement) with Claude Code to implement key components of Cash App's emerging Unified Suspension Platform which is projected to reduce the time to ship a new suspension type from 6 months to 48 hours

Software Engineer, Developer Experience | Block, Inc. | New York, NY, United States Apr 2023 - March 2025

- Improved developer experience within the mobile developer experience organization, focusing on optimizing workflows and tools for iOS developers
- Created a streamlined Bazel version upgrade workflow by implementing an isolated shadow build infrastructure in CI and generating key metrics to accelerate upgrade timelines and minimize developer disruptions
- Optimized build times by up to 30% with a Git hook prompting developers to branch from an optimized branch, reducing rework both locally and on CI
- Unblocked customers and stakeholders through on-call rotations by debugging production issues, answering questions in engineering support channels, and creating relevant documentation

Software Engineer II, Build Tooling | Twitter, Inc. | New York, NY, United States Mar 2021 - Feb 2023

- Designed and implemented software to facilitate the migration of Twitter's build tool from Pants to Bazel to improve developer productivity and development velocity at Twitter
- Created Bash and Python scripts to automate the migration of 1000+ BUILD files in 400+ directories resulting in a 35% reduction of load on Twitter's continuous integration pipeline saving the company around \$750k per month in costs and making builds faster
- Created infrastructure (composed of Python parsing scripts, schemas, Mysql databases, Tableau metrics, and Jenkins cron jobs) to identify production services using deprecated tooling in order to prevent migration-related production issues

Project Engineer | KSI Engineering, Inc. | Bakersfield, CA, United States Apr 2018 - Jul 2019

- Saved 15+ staff-hours weekly by improving meeting efficiency through data-driven dashboards

Mechanical Engineer | Enbridge, Inc. | Western Canada Jul 2016 - Mar 2018

- Supported the operability and reliability of a 0.7BSCFD natural gas processing plant

EDUCATION

University of Alberta | BSc. Mechanical Engineering - Biomedical Option

Sep 2011 - Apr 2016
